

## 1 FRONT WHEEL

The motorbike can feature two different fastening types for the wheel spindle:

- 1) The threaded part of spindle "A" extends from the LH strut and is fastened using a nut "B". The screws "C" ensure the dynamic packing.

**N.B.**

**This type of assembly was used up to chassis no. KR 113 165**

- 2) Spindle "A" is screwed into the LH strut which is threaded, the screws "B" ensure the dynamic packing.

**N.B.**

**This type of assembly was used up to chassis no. KR 113 166.**
